Business Case for 2027 Contingent Worker

GIA HK Data Analytics

Request for 1,400 hours of technical support in 2027

Executive Summary and Approval Request

Dedicated technical capacity is needed in 2027 to support planned audit work alongside a fully occupied team.

REQUEST

1,400
hours

of technical support in 2027

One contingent worker
GIA HK Data Analytics

Current capacity	The Data Analytics team has three employees, fully occupied with ongoing audit and analytics work. Capacity to develop new AI and automation solutions is limited.
2027 requirements	Planned audit and monitoring engagements, audit automation, Group initiatives (AotF, Databricks Genie Space pilot) and existing tools all require technical support.
Proposed resource	Technical expertise based within GIA HK, working directly with business auditors. Complements the continued support of TSS and DNA.
Expected improvements	Stronger technical support for audit engagements, practical automation of manual audit steps, and more responsive technical delivery. To be measured during 2027.

Decision requested: Approval of one contingent worker for GIA HK Data Analytics in 2027, covering up to 1,400 hours.

2027 Audit Workload and Existing Capacity

2027 brings technical needs across engagements, automation, Group initiatives and platforms.

Area	Planned 2027 activity	Technical support required
Engagements	Individual Life Claims Audit	Technical and analytics support to the engagement teams
	Premium Collection Audit	
	Post-Sales Call Analytics	
	Complaint Handling	
Automation	Audit automation and data pipelines	Automate data extraction from internal and external sources; build data pipelines as a foundation for continuous auditing
Group initiatives	Group AotF and Databricks Genie Space	Support the HK DA team on the Group AotF workstream; Genie Space pilot with Group AAT and Singapore DA teams
Platforms	Maintenance of existing analytics platforms	Maintain and enhance Databricks, SandBox and the tools developed in 2026

Engagements are planned for 2027 and remain subject to the final audit plan.

EXISTING CAPACITY

3 employees

in GIA HK Data Analytics

- Fully occupied with ongoing audit and analytics responsibilities
- Limited capacity to explore and implement new AI and automation solutions alongside the existing workload
- Allocation of the 1,400 hours is not fixed and will follow audit priorities

Technical Capability Demonstrated in 2026

Tools developed within GIA HK in 2026 show what embedded technical support can deliver.

Regulatory Automation Retrieves regulatory documents and uses AI to identify potentially relevant internal audit requirements for auditor review. Replaces manual website searches, relevance checks and recording of results. Covers approx. 259 documents (IA, BMA, AMCM).* STATUS Essentially usable	MedVerify Checks medical service providers on claims receipts against official regulator listings, to flag potentially suspicious cases for audit follow-up. STATUS Developed; awaiting approval for operational use	Welcome Call UI Interface for the Post-Sales Call Analytics AI solution, so that non-technical auditors can run analyses and access results directly. STATUS Front end essentially complete; backend integration outstanding	
Supporting data and desktop tools Expected to be usable; adoption and business validation not yet confirmed	SecureSheet Masks and encrypts sensitive spreadsheet data for secure handling during audits	DataCheck Checks audit datasets for missing values, duplicates, invalid formats and out-of-range data	Relationship Mapper Maps links between datasets to help identify anomalies and coverage gaps

Status reflects development progress; usage and time savings have not yet been measured. * Document count subject to verification.

Expected Business Value in 2027

The main value is practical AI and automation capability within GIA HK, alongside engagement support.

1

Audit delivery

- Technical and analytics support for planned 2027 audit and monitoring engagements
- Automated data extraction to support audit testing
- Existing team members stay focused on their ongoing audit responsibilities

2

Practical AI and automation development

- Works directly with auditors to understand workflows and identify repetitive manual activities
- Develops, tests and improves solutions based on auditor feedback
- Progresses 2026 tools towards operational use, subject to approval

3

Greater technical flexibility

- Responds directly to development needs as audit priorities change
- Maintains and improves existing tools and platforms
- Handles smaller development tasks, alongside continued TSS and DNA support

Longer-term capability: Data pipelines and reusable tools developed in 2027 are expected to provide a foundation for continuous auditing and strengthen GIA HK's own analytics capability beyond individual engagements.

These are expected benefits, not measured results. Proposed measures are set out on slide 7.

Why Dedicated Technical Capacity Within GIA HK?

The resource strengthens internal technical capability and complements continued TSS and DNA support.

	Existing DA team	TSS and DNA	Contingent worker (proposed)
Current focus	Ongoing audit and analytics responsibilities	Technical development support for GIA HK and other activities	Technical support based within GIA HK
Capacity for new development	Limited; team fully occupied	Available according to their own schedules and priorities	Allocated according to GIA HK audit priorities
Working with business auditors	Direct, within existing workload	Through cross-team coordination and planning	Direct, day-to-day
Role in 2027	Continue core audit and analytics work	Continue to support GIA HK where appropriate	Engagement support and smaller development activities

Why a contingent worker

- Works directly with business auditors on day-to-day needs
- Supports both regular audit engagements and practical development work
- Existing familiarity with GIA processes and technology can reduce onboarding needs
- Defined scope: one year, up to 1,400 hours
- TSS and DNA continue to provide support where appropriate

This comparison describes working models only. Cost is not assessed here and will be reviewed separately by HR and Finance.

Recommendation, Governance and Approval Request

A defined one-year resource, allocated by audit priority and reviewed against clear measures.

Recommendation: Approve one contingent worker for GIA HK Data Analytics for 2027, covering up to 1,400 hours.

Resource management

- Allocated according to audit priorities, under the direction of the Data Analytics lead
- Supports both audit engagements and technical development; engagement support remains a core responsibility
- Development work coordinated with TSS and DNA where relevant

Proposed accountability measures

- Audit engagements supported
- Automation solutions developed or improved
- Solutions adopted by auditors
- Reduction in manual effort, where measurable

A management progress review during 2027 is proposed.

Decision requested: Approval of the 2027 contingent worker resource requirement (up to 1,400 hours).

Cost and contract terms will be assessed separately by HR and Finance.
