Business Case for 2027 Contingent Worker

GIA HK Data Analytics

Request for 1,400 hours of technical support in 2027

Executive Summary and Approval Request

Additional technical capacity will support 2027 audit delivery and practical automation within GIA HK.

REQUEST 1,400 hours of technical support in 2027 One contingent worker GIA HK Data Analytics	
Why it is needed	The three-person Data Analytics team is fully occupied with ongoing work. Planned 2027 engagements, automation, Group initiatives and tool maintenance all need technical support.
What it will deliver	Technical support for planned audit engagements, and practical AI and automation solutions developed directly with business auditors.
Why it benefits GIA HK	Technical capacity within the audit team, responsive to audit priorities. The existing team stays focused on its ongoing responsibilities, and TSS and DNA support continues.

Decision requested: Approval of one contingent worker for GIA HK Data Analytics in 2027, covering up to 1,400 hours.

2027 Audit Workload and Existing Capacity

Planned 2027 work needs technical support that the current team has limited capacity to absorb.

Area	Planned 2027 activity	Technical support required
Engagements	Individual Life Claims Audit	Technical and analytics support to the engagement teams
	Premium Collection Audit	
	Post-Sales Call Analytics	
	Complaint Handling	
Automation	Audit automation and data pipelines	Automate data extraction and build data pipelines towards continuous auditing
Group initiatives	Group AotF and Databricks Genie Space	HK support for the Group AotF workstream and the Genie Space pilot
Platforms	Maintenance of existing analytics platforms	Maintain and enhance Databricks, SandBox and the 2026 tools

EXISTING CAPACITY

3 employees

in GIA HK Data Analytics

- Fully occupied with ongoing audit and analytics work
- Limited capacity for new development alongside the current workload
- Hours to be allocated by audit priority; engagement support remains a core responsibility

Engagements are planned for 2027 and subject to confirmation in the final audit plan. Team capacity reflects GIA HK management's assessment.

Technical Capability Demonstrated in 2026

2026 work shows that practical solutions to audit needs can be developed within GIA HK.

Regulatory Automation

Retrieves regulatory documents and flags potentially relevant audit requirements for auditor review, replacing manual searching. Covers approx. 259 documents.*

STATUS

Essentially usable

MedVerify

Checks medical providers on claims receipts against official regulator listings to flag potentially suspicious cases.

STATUS

Developed; awaiting operational approval

Welcome Call UI

Lets non-technical auditors run post-sales call analytics and access results directly.

STATUS

Front end essentially complete; backend integration outstanding

Supporting desktop tools

SecureSheet – data masking and encryption **DataCheck** – data quality checks **Relationship Mapper** – dataset linkage analysis

Status: expected to be usable; adoption not yet confirmed

*Status reflects development progress. No tool is yet in full operational use, and time savings have not been measured. * Document count subject to verification.*

Expected Business Value in 2027

Each activity links to a practical benefit for audit delivery and GIA HK's capability.

Audit delivery

WHAT THE ROLE DOES

Provides technical and analytics support to planned 2027 audit and monitoring engagements.

EXPECTED BENEFIT

Planned engagements receive the analytics support they need, while the existing team maintains its regular responsibilities.

Practical AI and automation development

WHAT THE ROLE DOES

Works alongside auditors to understand their processes first-hand, identify repetitive manual steps and build solutions.

EXPECTED BENEFIT

Solutions reflect real audit requirements and are improved through auditor feedback, so they are practical to use.

Technical flexibility

WHAT THE ROLE DOES

Handles smaller development needs and tool maintenance, coordinating with TSS and DNA where needed.

EXPECTED BENEFIT

GIA HK can respond more directly to changing audit priorities, and existing tools remain maintained.

Longer-term capability: Data pipelines and reusable tools developed in 2027 are expected to provide a foundation for continuous auditing and strengthen GIA HK's own analytics capability.

Expected benefits, not measured results. Proposed measures are set out on slide 7.

Why Dedicated Technical Capacity Within GIA HK?

GIA HK benefits from technical expertise that works directly with its auditors on its priorities.

	Existing DA team	TSS and DNA	Contingent worker (proposed)
Main focus	Ongoing audit and analytics work	Technical development for GIA HK and other areas	Engagement support and development within GIA HK
Availability for GIA HK development	Limited; team fully occupied	Scheduled alongside their other priorities	Dedicated to GIA HK audit priorities
Working with business auditors	Direct, within existing workload	Through cross-team planning	Direct and day-to-day

Why a contingent worker

Adds dedicated technical capacity for a defined period (2027, up to 1,400 hours). Existing familiarity with GIA processes and technology can reduce onboarding. TSS and DNA continue to support GIA HK where appropriate.

Recommendation, Governance and Approval Request

A defined one-year resource, allocated by audit priority and reviewed against practical measures.

How the resource will be managed

- Allocated by audit priority, under the direction of the Data Analytics lead
- Supports both audit engagements and technical development; engagement support remains core
- Development work coordinated with TSS and DNA where relevant

Proposed accountability measures

- Audit engagements supported
- Automation solutions developed or improved
- Solutions adopted by auditors
- Reduction in manual effort, where measurable

A management progress review during 2027 is proposed.

Decision requested: Approve one contingent worker for GIA HK Data Analytics for 2027, covering up to 1,400 hours.

Cost and contract terms will be assessed separately by HR and Finance.
